| Eligibility  |             | Residential customers in the distributor area must have the <b>Minimum solar PV capacity</b> and <b>Minimum sonnenBatterie useable capacity</b> for the relevant sonnenFlat plan.   |                                   |             |              |
| Adjusted Annual Usage Allowance  |             | Each household must produce the <b>Minimum Annual Generation</b> quantity of energy over a 12-month period. Where the annual energy production falls below the <b>Minimum Annual Generation</b> , the <b>Annual Usage Allowance</b> will be reduced proportionally to the shortfall in the <b>Minimum Annual Generation</b> . e.g.: For <b>sonnenFlat Economy</b> , if actual annual solar production is 6,000 kWh, then the <b>Adjusted Annual Usage Allowance</b> is => $7,500 \times 6,000 / 6,050 = 7,438$ kWh. |                                   |             |              |
| Excess Usage Rate  |             | Once the <b>Adjusted Annual Usage Allowance</b> is exceeded, usage from the grid will be charged at the <b>Excess Usage Rate</b> .  |                                   |             |              |
| Solar feed-in Rate   |             | Energy exported above the <b>Annual Export Threshold</b> will be paid at the <b>Solar feed-in Rate</b> .  |                                   |             |              |
| Early termination  |             | <b>Annual Usage Allowance</b> and <b>Minimum Annual Generation</b> will be reduced pro-rata where a customer ends the agreement within a 12-month period.   |                                   |             |              |
| Metering   |             | Measurements from sonnenBatterie meters and regulated NMI meters will be used to determine <b>Annual Usage Allowance</b> , <b>Minimum Annual Generation</b> , exported energy, and excess usage.<br>Regulated NMI meters measuring usage and export to grid must be interval meters.  |                                   |             |              |
